RE: Water Disposal Plans and Monitoring

Dear Mr. Goodwin:

As stated in the Utah Water Pollution Control Committee's letter of March 21, 1986 we do not have adequate design details of the Delano low pH wastewater control system. The submittal of some pond volume information in May, together with the spring intercept plan of December 12, 1986 has not been sufficient to determine the adequacy of the system. We recognize that the interception and diversion of the spring water which has been accomplished should improve the situation.

Since the wastewater ponds are still in use, we again request that the company submit within two weeks cross sections showing pond slopes, permeability data, current freeboard and other appropriate design information on the ponds. This information should be submitted to Wayne Thomas at 354 East 600 South Suite 301, St. George, Utah 84770 and to this office. We also request that current sampling data, monitoring locations and monitoring frequency as requested last March and in our February 17, 1987 phone conversation be submitted to this office within two weeks.

Please contact Steven McNeal at 538-6146 or Wayne Thomas at 673-3528 if you need to discuss these requests.

Sincerely,

UTAH WATER POLLUTION CONTROL COMMITTEE

/s/

Calvin K. Sudweeks,  
Executive Secretary
